*Portfolio Manager*

- » Over 20 years of investment industry experience

*We believe Financial companies may be entering an earnings growth phase not seen in at least a decade. Portfolio Managers Dave Ellison and Ryan Kelley discuss the factors driving this potential growth and how the Funds are positioned to benefit.*

### 1. Would you please discuss the factors that drove the strong rally in Financial stocks in the last two months of 2016?

The surprise election of a Republican administration in November caused financial market participants to abruptly raise their expectations for faster economic growth and higher inflation, triggering a powerful rally in equities, higher rates across the yield curve and a sell-off in bonds.

Financial stocks led the rally in equities as investors concluded they would likely benefit significantly from higher interest rates. Financial stocks, particularly bank stocks, have experienced compressed margins over the last eight years in the historically low interest rate environment. Therefore, it was no surprise that they reacted immediately and favorably to the jump in rates, as investors priced in expectations that higher rates would lead to an expansion in lending margins and thus, higher profitability. The Federal Reserve's quarter-point increase in short term rates in December 2016 only reinforced consensus opinion that 2017 could be a year of rising rates.

Additionally, Financial stocks' share prices were pushed higher by hopes that faster economic growth, tax reform and increased investment spending on infrastructure could lead to robust loan demand and a continuation of excellent credit conditions.

Lastly, investors were optimistic that the deregulation of the banking industry would provide the ability for banks to grow their loan portfolios, lower the cost of compliance and possibly generate more merger and acquisition (M&A) activity.

### 2. What should investors focus on in the Financial sector over the next few years?

We believe it's important to focus on the improving fundamentals of Financial companies. Over the last eight years, banks have operated in a heavily regulated, low rate environment. Low rates have depressed bank lending margins, and new regulations have curtailed bank lending, raised capital adequacy ratios and increased the cost of compliance.

Many banks reacted to this environment by focusing on what they could control. In order to improve profitability, many banks reduced costs, improved efficiency, raised credit standards and engaged in M&A. As a result, we believe the industry has become fundamentally healthier. We are encouraged by most fourth quarter earnings results, which showed increasing earnings, improving asset quality and higher profitability in general versus the comparable quarter last year.

Thus, we believe banks are in a strong position. Should interest rates continue to rise, we are hopeful that banks will be able to generate higher lending margins. Together with robust economic growth powering loan demand, this favorable environment could generate a strong growth phase for earnings.

**3. How have you positioned the Hennessy Small Cap and Large Cap Financial Funds to potentially benefit from an improving landscape?**

For the Hennessy Small Cap and Large Cap Financial Funds, we remain focused on holding a limited number of high-quality banks with well-structured balance sheets, strong growth potential and experienced management. We prefer to own those that have the ability to be profitable regardless of the rate environment. Therefore, in the event that rates rise as expected, the economy strengthens and/or regulations are eased, we believe the Funds' holdings are poised to outperform relative to the broader Financial sector.

**FUND PERFORMANCE** as of 3/31/17

Hennessy Small Cap Financial Fund	Average Annualized Total Return					
	3 Month	1 Year	3 Year	5 Year	10 Year	Since Inception (1/03/97)
